Web Hosting

Unlike other web hosting companies who are just resellers for other companies, MAGSNET has been managing its own dedicated servers in state of the art data center in Atlanta, GA

The Network

Our network utilizes Border Gate Protocol (BGP4). BGP creates a truly redundant network by routing IP traffic over the most efficient route possible. The network is connected to the Internet backbone via multiple T-3 (45 Mbps) lines. Carriers include UUNET, QWest and Sprint guaranteeing path optimization and load balancing. OC-12 fiber-optic racks are installed on the premises.

Our network uses top-of-the-line Cisco Systems 7000 series backbone grade routers on the core layer and Layer 3 switching on the distribution layer providing superior segmentation and increased bandwidth across the backbone. Each server is connected to it's own switched 100Mbps port reducing congestion and broadcast storms usually associated with the use of hubs.

WINDOWS 2000 SERVER

	Processor	Intel Pentium III 933MHz
	Memory	384MB ECC 100MHz
	Hard Drive	18GB SCSI Hard Disk
	Operating System	Microsoft Windows 2000 Server with SP4
	Web Server	Internet Information Server 5.0
	Other Tools	Microsoft FTP Service, MS DNS Server, Windows Scripting Host
	Database Support	MS Access 97/2000 Microsoft SQL Server 2000

UNIX SERVER

	Processor	Intel Pentium 4 2.5GHz
	Memory	512MB DDR RAM
	Hard Drive	80GB Hard Disk
	Operating System	Red Hat Linux 7.3
	Web Server	Apache
	Other Tools	Exim, BIND 8, CPOP, and CPANEL
	Database Support	mSQL Database Support

CONNECTIVITY

	Connectivity	- Layer 3 Switch 100MBps Port - Redundant T3 (45Mbps) backbone
